Removnig usernames and links

Removing tweets without relevant words in them

Removing Advertisemnets by hashtags

Sentiment Analysis

Hugging Face

- Offers open-source libraries and tools for natural language processing (NLP) tasks.
- Libraries are widely used by researchers, developers, and data scientists to build and train state-of-the-art NLP models.
- Offers several pre-trained models for various NLP tasks, including sentiment analysis.
- One of the models used for this project is the Twitter RoBERTa Base Sentiment model from CardiffNLP, which is trained on Twitter data for sentiment analysis.

Sentiment Analysis

- Labels were defined as Negative, Neutral, and Positive
Compound scores were calculated afterwards

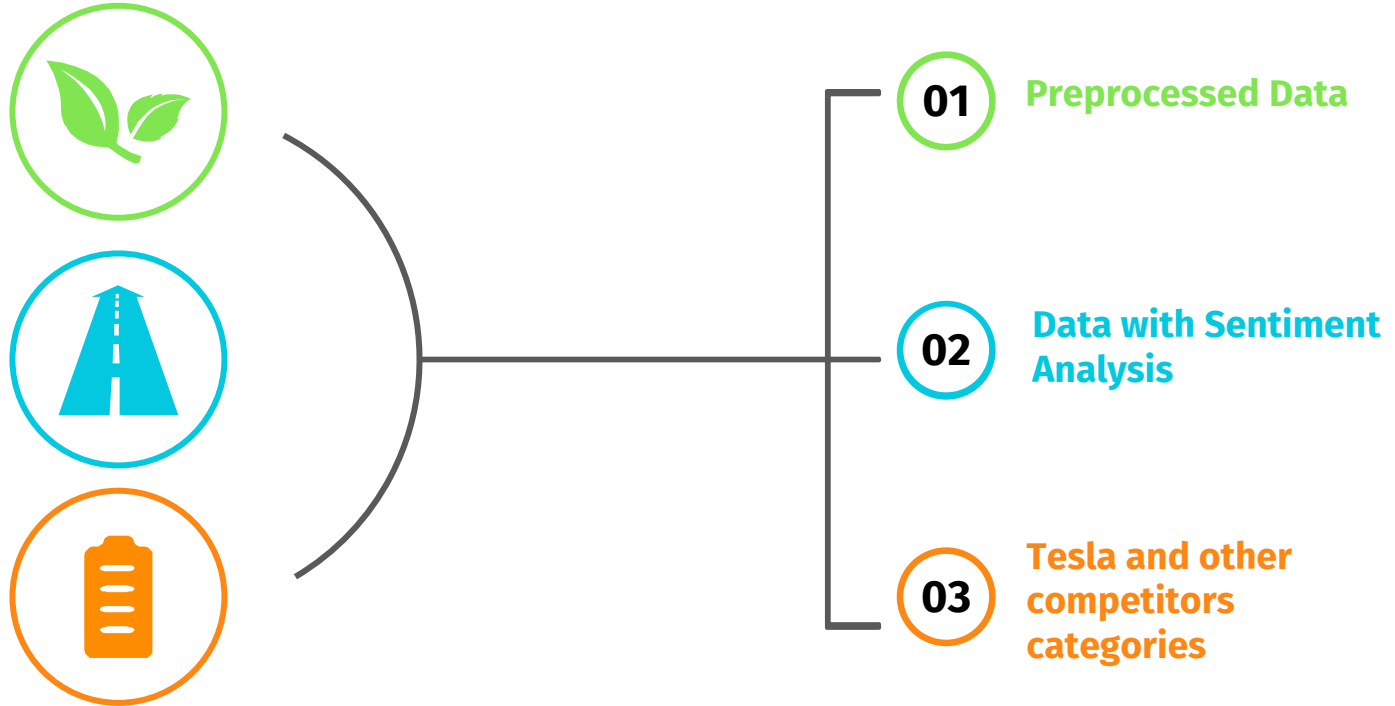

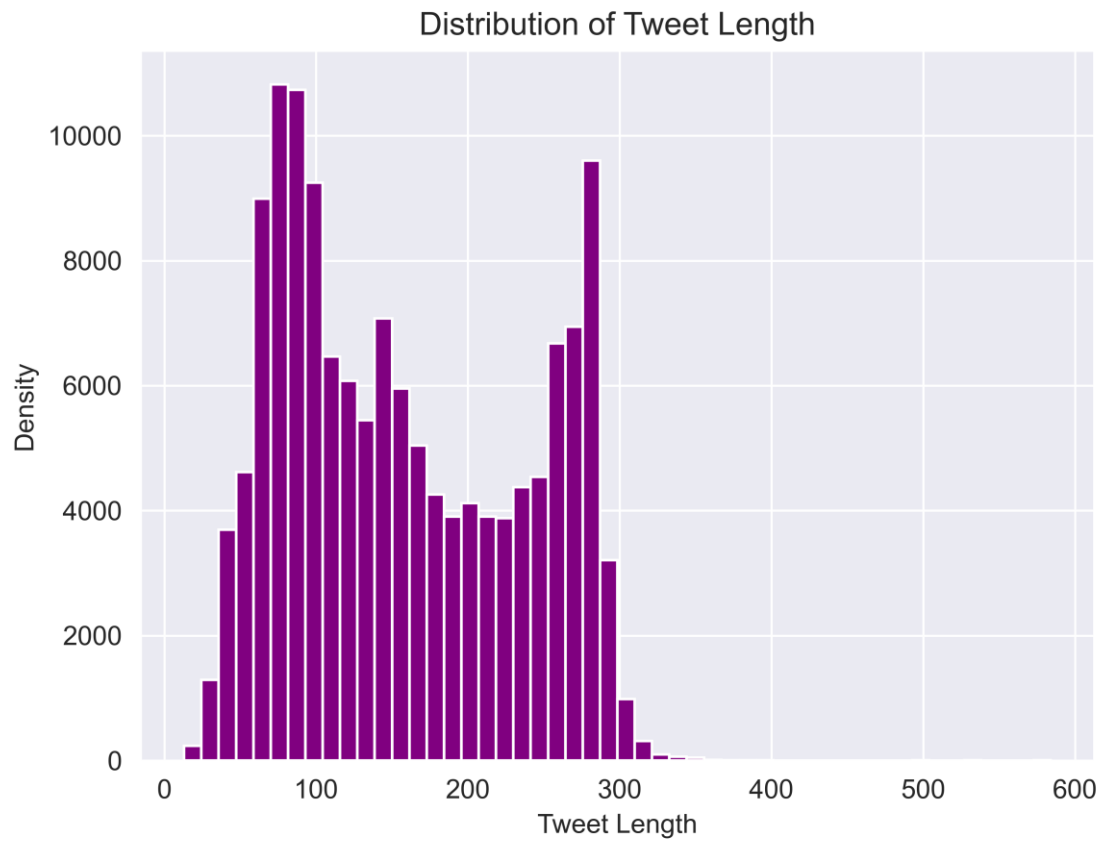

- TensorFlow was used to run the model and get the sentiment scores

- **TFAutoModelForSequenceClassification** a pre-trained deep learning model

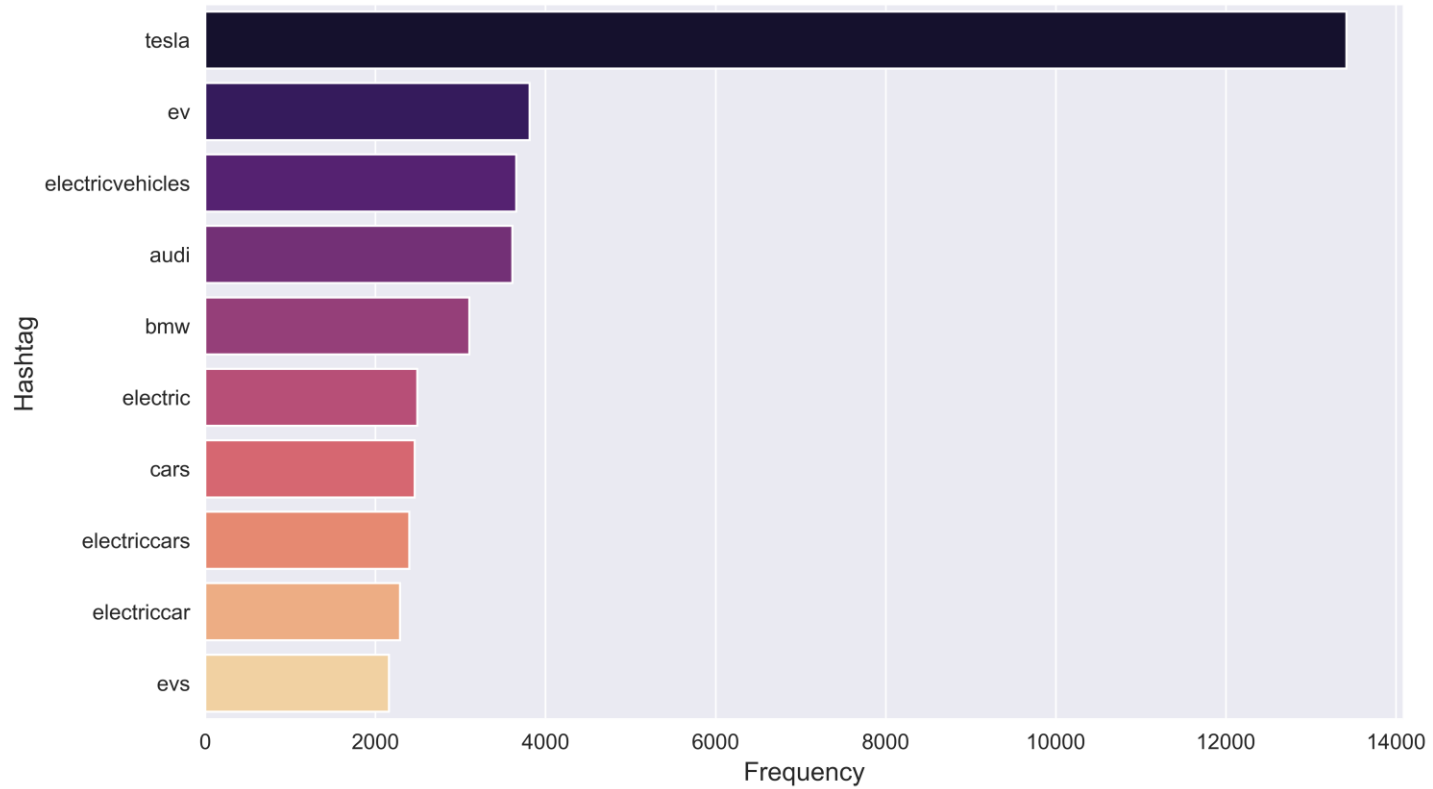

- Range of compound scores: $(-1, 1)$
- Range of scores: $(0, 1)$

Exploratory Data Analysis

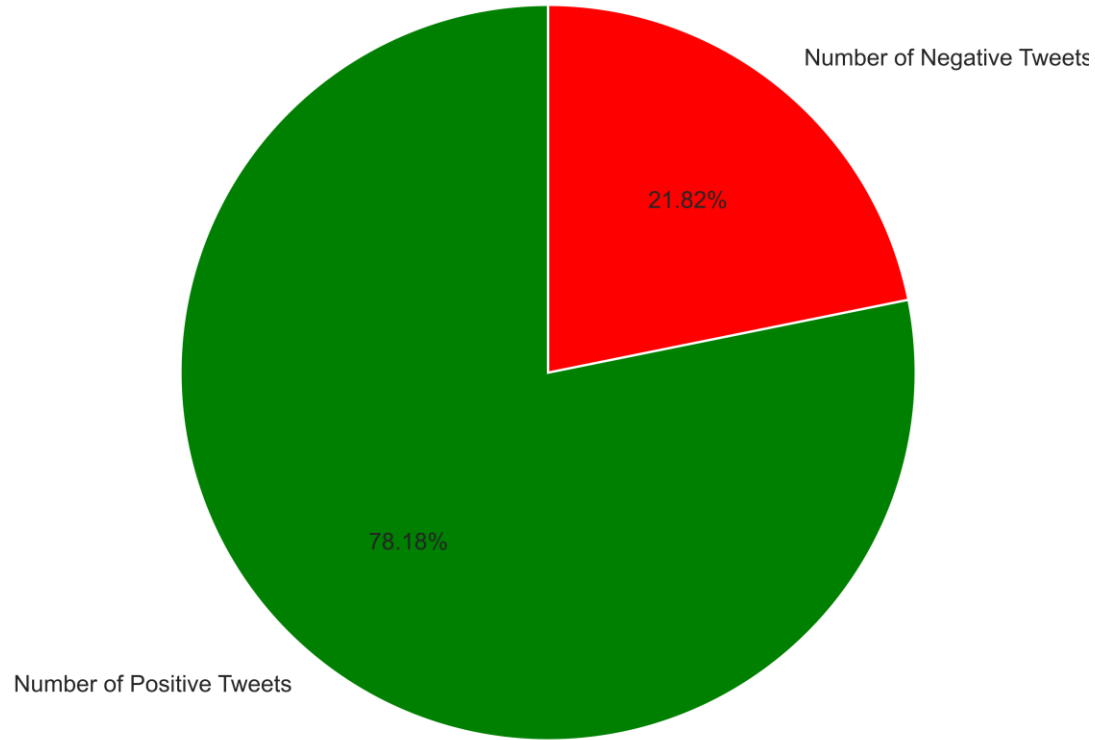

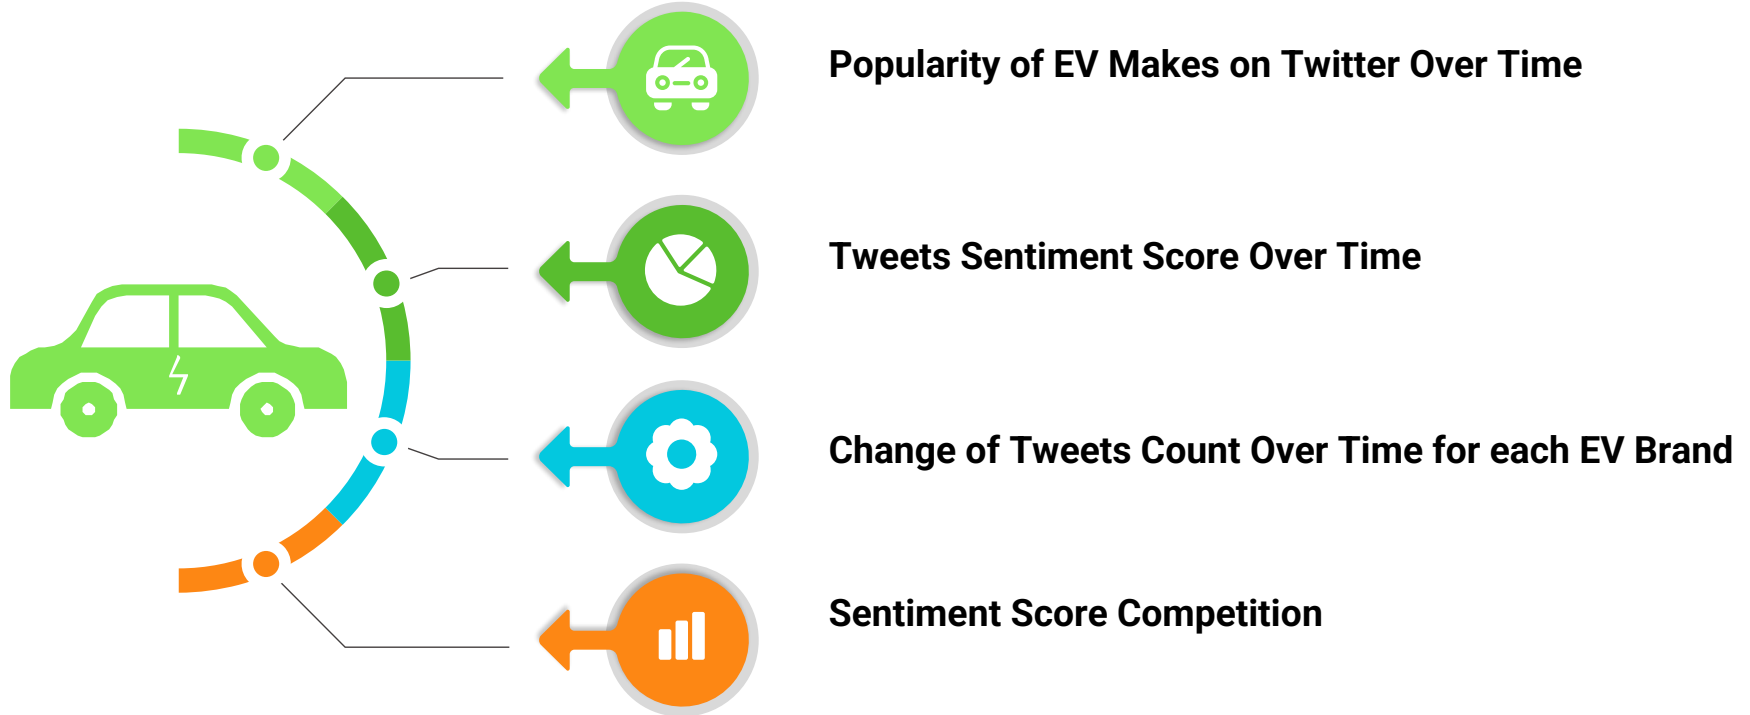

Top 10 Hashtags

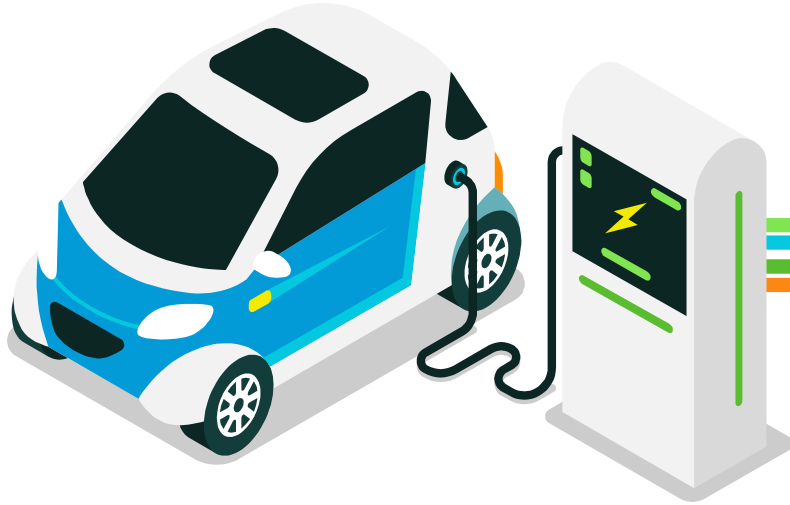

Positive tweets vs. Negative tweets

Tweets Analysis Over Time

Topic Modeling

Latent Dirichlet Allocation (LDA)

**Countvectorizer:
Transform text to vector**

**TfidfVectorizer :
Word frequency in tweets**

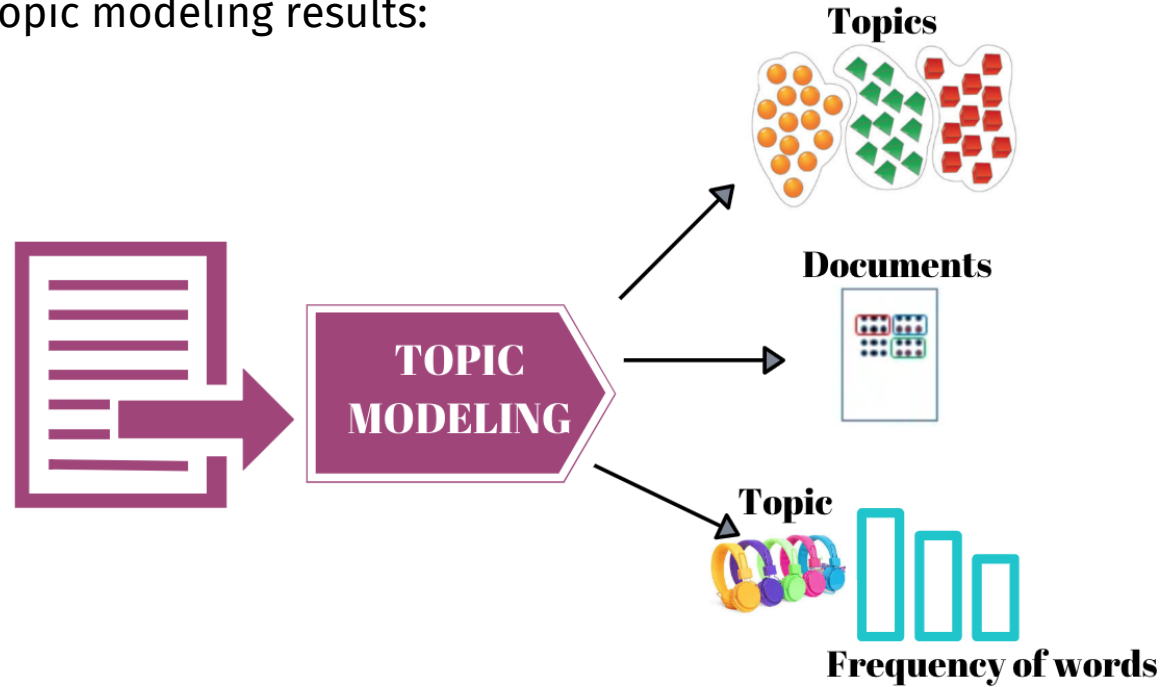

Find the optimal LDA model

Topic Modeling

Let's take a look at topic modeling results:

- BMW
- Mercedes-Benz
- Tesla

Competitors Insights...

- The Model X is not a good SUV. R1S runs laps around it.
- I had a Model S before having children. It's not easy parking it between the lines and then having to open the long doors. especially in the city. Model X Plaid will replace our Model Y after we take delivery of the Rivian R1S that will serve as our grocery mule.
- It's more about Model X vs R1x. If you just need a basic crossover, grab a Model Y and save \$30k. Model S is somewhat played out - a Taycan is a better all around car, it just doesn't have the same 1000+HP party trick. Lucid is stealing customers who want the max range.

Competitors Insights...

- Definitely. R1S is a much better product than a Glorified Van(model X).
- I have no doubt that Lucid Air is going to impact Model S sales and Rivian R1S will impact X sales. In summary, I 😊 model S (🤨 3, X, Y). But I would not trust FSD on surface streets. Not at all. The technology is not there yet. So consider those extra \$7K. Though it will be like \$10K after purchase. Maybe your year will be lucky to include all the reqs... Good Luck.
- What year model is yours the 2021 I was in was extremely quiet. Some of the things you stated were actually things I did not like with the Rivian. Road noise and ride, also the seats were very uncomfortable compared to the X and our Lexus. They have also had service issues.

Tesla Insights...

- The order rate for the Model Y peaked a couple days after the price cuts in January and declined over the remainder of the quarter ending March below the orders levels in Q4. The Model 3 is a disaster. The S/X are dead.
- EQS SUV is pretty close to Model X as well. I know quite a few who ended up buying X because they don't like S and Y is too small for family.
- The spread between model 3/Y and Model S/X was too wide for near identical product. That's the main issue. Y selling like pancakes why buy something double the price
- The Model X plaid brake color doesn't match the UltraRed. Would be great to update the brake paint. In day light, the mismatch is quite obvious.
- Elon, would you consider making an SUV version of the Cybertruck for the US market? While great, the Model Y is sadly too small for a lot of Americans and the Model X is too expensive.'

Tesla Insights...

- I have been having issues with my Model X's climate control and key fobs for over a year. I have been in service 6 times with no fix. Is there any way we can escalate this and find a resolution? I love my car and just want it to work properly!
- Is there an option to not have plastic around the wheel arches on the model X? It looks awful.
- Weird how so many model X windshield seem to crack. It almost like the body has too much flex in it.
- I would buy one right now if they would make a decent car for large families. So more than 5 seats. Unfortunately the Model Y 7 seater is a bit small and not available in Europe. And the Model X is too expensive.
- Tesla has to focus on technology because they seem to struggle with mechanical 'luxury' features like sunroofs that actually open, model S door handles, model X falcon wing. Cousin's boss bought a X last month, already in the shop door issues

Tesla Insights...

- The order rate for the Model Y peaked a couple days after the price cuts in January and declined over the remainder of the quarter ending March below the orders levels in Q4. The Model 3 is a disaster. The S/X are dead.
- Had 2 years of absolute hell with my model X. The quality from day one was terrible I should have rejected it. Been to 3 different service centers to try and find decent service and that's impossible. The car has constant issues. I WILL NEVER buy this brand ever again.
- My Model X, in Chicago winter, only gets ~130 miles on a charge.... And that's w/o heat running high either. (~67F speed 4 fan / driver heated seat)

And looking through a lot more positive and negative tweets brought us the following result..

Tesla Insights

Software

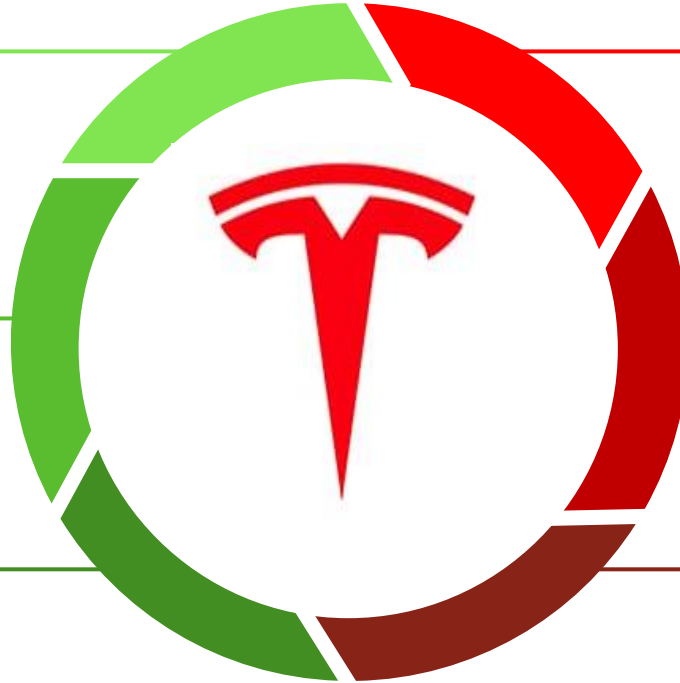

Build

Model 3/Y Price

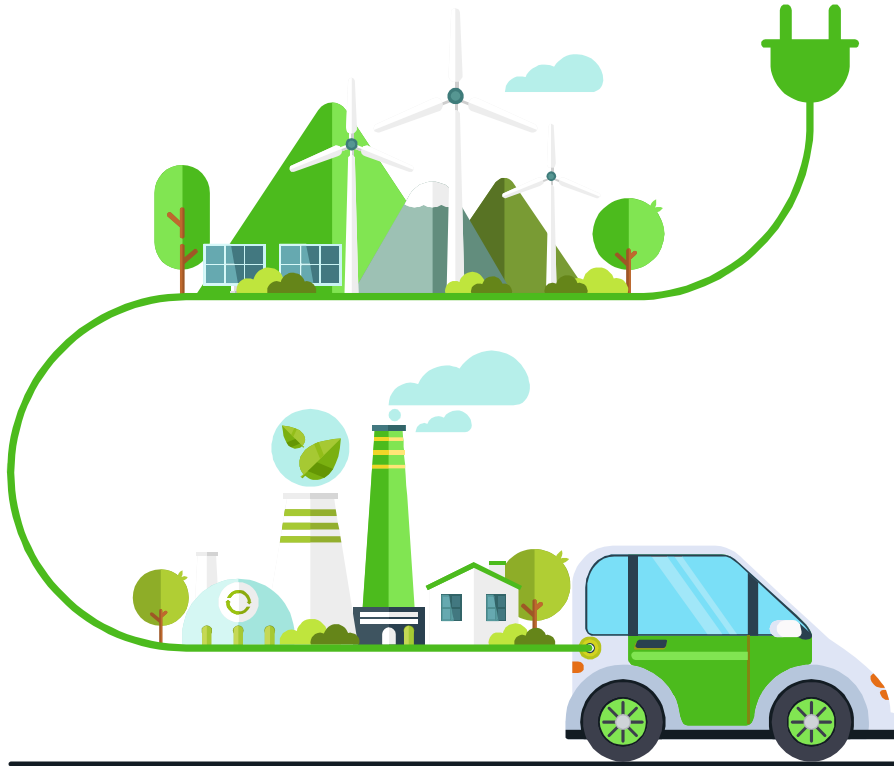

No Family Size

Battery

Autopilot

Future Work

- More Filtering on Tweets to get the most related tweets
- Removing Ads
- Improving Sentiment Analysis on comparison sentences
- Trying other models and algorithms
- Scraping more tweets
- Considering more competitors
- Prediction of future sentiment scores
